

COPPER COMPANY

ARIZONA

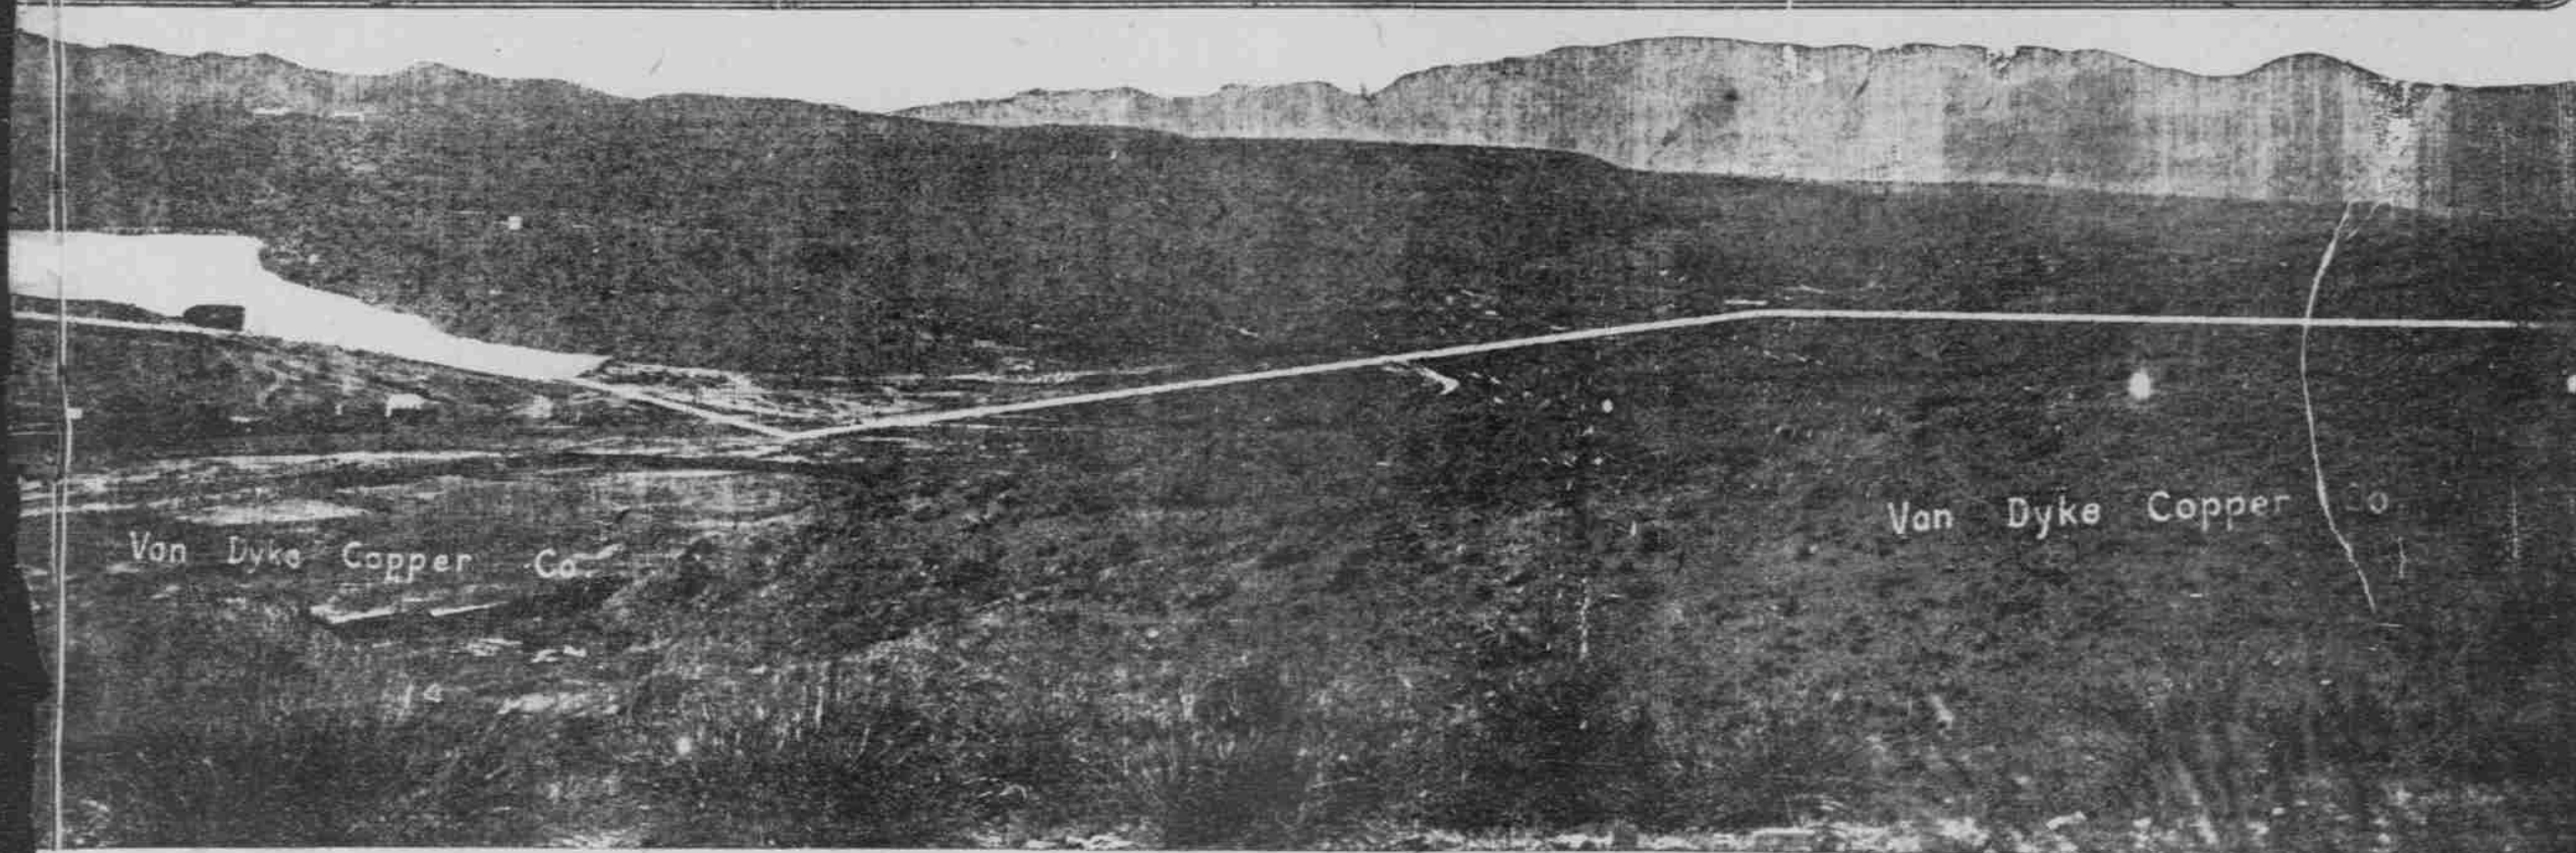

Investment to the People the Southwest

into 10,000,000 shares. Treasury stock consists of 3,000,000 shares. A limited number of shares are offered at the
or of pro-rating among the subscribers the issues of shares sold at 50c per share.

Another Arizona Mine You Will Hear About

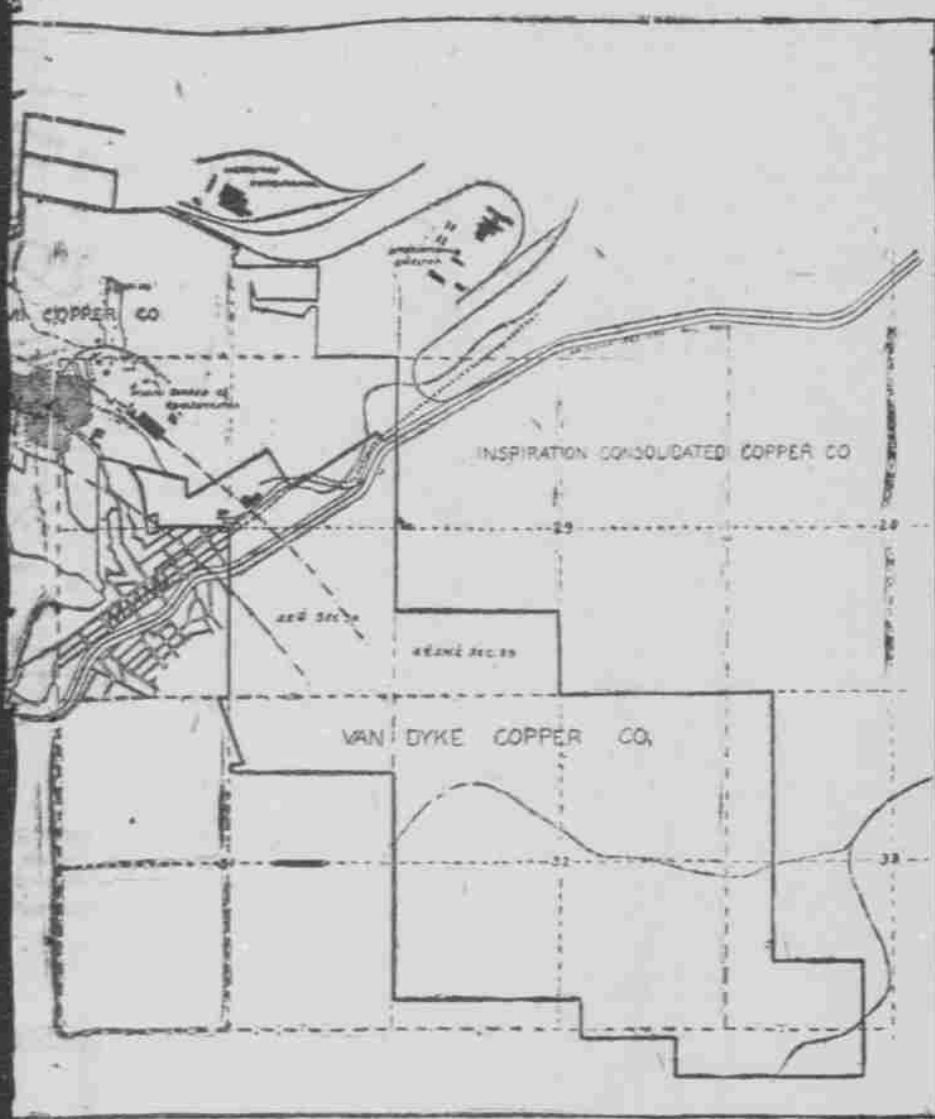

YOUR investment is invited only after the most careful and exhaustive expert examinations have been made. Its promoters are men of ability and mining experience. Study both the photograph and map carefully. Notice the location of the new Van Dyke Copper company in reference to the Inspiration Consolidated and the Miami Copper Company. The opportunity is open to you right now to buy Van Dyke Copper Company stock at fifty cents a share. If you want a mining proposition in the heart of the great billion dollar copper district where millions of dollars of dividends are being made every year, here is your chance. Study the map carefully. It may mean a great deal to you. Notice the proven ore zone. It contains a billion dollars worth of ore. It is one of the largest copper ore bodies in the world. It is about two and one half miles long. It is about one half a mile wide in its widest part. Notice how it starts in the Southwestern Miami and circles through the Inspiration Consolidated and the Miami mines. Notice that it has been developed nearly to the Van Dyke Copper company property. Notice the direction the ore body is traveling. The Van Dyke Copper Company is only two hundred yards from it and in the right direction. If you want to participate in the development of the Van Dyke Copper Company now is the time to buy your stock. Shares are being sold for fifty cents a share.

The Property of the Van Dyke Copper Company Contains 1,156.94 Acres, of Which 316.94 Acres are Patented and 840 Acres are Unpatented Mining Claims

Ore Body Has Been Developed About Two and One-Half Miles
ately Three Miles.

Y ARE VERY INTERESTING AND INSTRUCTIVE.

This Is a Property In An Ore Location

The ore of the Miami district occurs in large disseminated bodies. They are found by drilling through the capping or overburden. In all probability one of the largest copper ore bodies ever developed in the world is found in the properties adjoining the Van Dyke company. Roughly speaking, this ore body is developed two miles and a half long and about a half of a mile in its widest part. It varies in thickness from 85 to 375 feet. It lies in the shape of a crescent or arc as far as it has been developed at the present time. Beginning at the Southwestern Miami it sweeps eastward through the Live Oak mine, Keystone mine, Inspiration Consolidated mine and the Miami mine, and has been developed to within two hundred yards of the VAN DYKE COPPER COMPANY PROPERTY. A GLANCE AT THE MAP WILL SHOW THE TREND OF THE ORE. Drilling operations are constantly bringing in new information concerning the general trend of the ore body, but sufficient data is now available to give a good idea as to where to drill in order to secure the best and most profitable results. (The Miami Copper company in their 1915 annual report, page ten, claims to have 41,140,000 tons in the part of the ore body on their party as drilled up to 1915.)

The Inspiration Consolidated on page 5 of their 1915 report shows their

drills had developed up to that time 97,143,000 tons of copper ore, or approximately 100,000,000 tons of ore. The part of this great ore body developed on these two mines alone is over 138,283,000 tons, having a value of over a billion dollars. The Van Dyke Copper company expects to explore their property through the usual drilling operation.

Their first effort will be to explore for the extension of this great ore body within the confines of the property owned by them. (A glance at the map shows the Van Dyke Copper company includes 15,500 feet of the general trend of this great disseminated copper ore body, or nearly three miles of probable ore zone.)

Excellent sites on the railroad are available for power house, lumber yard, warehouses, ore bins, storage and unloading yards. The property has an excellent site for a concentrator and storage site for tailing dump located near the concentrator site. The tailing dump will be located so as to pile tailings in the most economical manner out of the way of the mine. The property adjoins the independent town of Miami, where adequate home facilities are available for the employees. The company will thus avoid the necessity of investing in houses for employees, leaving all of the money for strictly mining purposes.

Location With Reference to Producing Mines

The Van Dyke Copper Company's property is located in the Miami mining district, Gila county, Arizona. The property is joined in the west by the Miami townsite, on the north by the Miami Copper Company and on the east by lands owned by both the Miami Copper Company and the Inspiration Consolidated Copper Company. These two large copper producers will earn a net profit during the last fiscal year of \$31,000,000 from ore mined, milled and smelted upon their properties in this district. The northern portion of the Van Dyke Copper Company's property is located within two hundred yards of the Miami ore body on the same mountain side in which occurs the ore body of both the Inspiration and Miami.

The Miami concentrator and main shaft through which all their ores are hoisted are about 300 yards from the north side line, while the Inspiration Consolidated concentrator is a mile north of the property of the Van Dyke Copper Company. These facts are given in order to aid in locating the Van Dyke Copper Company property in reference to the present producing mines.
